SNAPSHOT OF THE INTERCITY GENERATION PROJECT

The latest version of the IIE Transport Generation Project has added a new feature to the model:

- A new set of generation types were added in this addition.

Several new generation types were added to the model:

- Type A: This model type includes a better understanding of the interactions between the different types of generation.
- Type B: This model type includes a better understanding of the interactions between the different types of generation.
- Type C: This model type includes a better understanding of the interactions between the different types of generation.

These new generation types were added to improve the accuracy of the transport generation model, which is used to

- Better predict future trends
- Better understand the interactions between different types of generation
- Better plan for future needs

The enhanced model is expected to provide more accurate predictions and better insights into the transport generation process.
